CONTROLLING FONTS AND COLOURS IN FIREFOX

Introduction

You might find it easier to use the web with certain fonts and colours. Firefox makes it easy to control these.
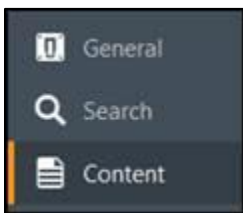

At the top right on the screen is the Menu button.

Click on this and choose Options.

Select 'Content' from the left side menu.

The Fonts & Colours options allow you to change the fonts and colours.

Fonts

You can change the default font, which can be over written by web pages. Alternatively, you can go to the 'Advanced...' options, set the fonts that you always want to use, and uncheck the 'Allow pages to choose their own fonts, instead of your selections above' check box.

Finally click on 'OK'.

Colours

If you want to control the colours on the page, click on the 'Colours…' button.

On the Colours option page you can change the Background colour. In this example I set it to blue.

The 'Override the colours specified by the page with your selections above:' option can then be set to 'Always' if you want to use the colours, or 'Never' if you want to turn them off.
