

## **REF2** workflows

This guide is for Editors of REF2.

Guide updated 18/09/2020

- As part of <u>your updates to REF2 in Pure</u>, <u>you</u> need to update the Workflow for selection to REF2021 (UOA workflow)
- The Research Office will update Status (RO Workflow)
- See also: REF2 workflow flowchart.

## **UOA** workflow statuses

Status	What does it mean?
Proposed	<ul> <li>The output has been proposed &amp; a REF2 created.</li> </ul>
	The UOA review has not yet begun.
Selected for	The UOA has started its review of the REF2 and is
review	updating the REF2 fields.
Selected for	The UOA has completed its review and update of the
UOA pool	REF2, inc. author attribution.
	<ul> <li>The UOA is recommending the REF2 to the REF</li> </ul>
	Decisions Panel for the submission.
	<ul> <li>The RO will check the DOI/PDF status and lock the record.</li> </ul>
Not selected	<ul> <li>UOA has completed its review and update of the REF2.</li> </ul>
for UOA pool	<ul> <li>The UOA is not recommending the REF2 to the REF</li> </ul>
	Decisions Panel for the submission.
	The RO will lock the record.

 Every REF2 should end up either Selected for UOA pool or Not selected for UOA pool.

You **must** attribute an author before saving a REF2 as Selected for UOA pool.

 The REF Decisions Panel needs to review every proposed output to make its decision and it can only do this when the UOA has reviewed and ruled the REF2 in or out of the UOA pool.

## RO workflow statuses

Status	What does it mean?
REF2 Entry in	The RO has not started its checks yet.
Progress	
REF2 Checking	The RO has <u>started its checks</u> .
Underway	The UOA should not make changes to the REF2 without

Status	What does it mean?
	checking with the RO first.
REF2 Confirmed	The RO has completed its checks.
	Only the RO can update the REF2.
	The REF2 will be exported to the REF submission
	system if UOA workflow = Selected for UOA pool.

## Tracking the workflows

- To help track the workflow, a <u>report</u> has been shared with all Pure users with REF2 access: Reporting > Shared by institution > **REF2 workflows**.
- Open the report and go to the *Data story*, along the bottom of the window if it does not open on it.
- You will see a table showing how many REF2s sit at each workflow step and if authors have been attributed.
- You can view all outputs in a step by clicking on the number of REF2 for that
  row in the table. Either choose a single record or select Show in content list to
  be taken to a filtered summary screen for those records.
